National Survey Shows Mainers Are More Financially Literate Than National Average, but Near Bottom in Saving for Rainy Day

WASHINGTON – America’s first [State-by-State Financial Capability Survey](#) revealed that Mainers are more financially literate than the national average, but are among the worst in having a “rainy day” fund for emergency expenses. The findings are part of the National Financial Capability Study, conducted by the FINRA Investor Education Foundation, which explores in-depth how Americans manage their resources and make financial decisions.

The survey findings are available on a new website, www.usfinancialcapability.org, which features a clickable map of the United States and allows the public, policymakers and researchers to delve into and compare the financial capabilities of Mainers with residents of other states and across geographic regions. The State-by-State Financial Capability Survey, which surveyed more than 28,000 respondents, was developed in consultation with the U.S. Department of the Treasury and the President’s Advisory Council on Financial Literacy.

While Mainers outperformed the nation in financial literacy, they ranked fifth-from-the-bottom in having a “rainy day” fund to cover emergency expenses. Results include:

Making Ends Meet: 57 percent of Mainers are living paycheck-to-paycheck. By comparison, 55 percent of Americans report spending more than or about equal to their household income.

Planning Ahead: 67 percent of Mainers do not have a “rainy day” fund to cover three months of unanticipated financial emergencies. This compares to 60 percent Americans nationwide.

Managing Financial Products: 26 percent of Mainers have engaged in some form of high-cost, non-bank borrowing during the last five years, including taking out a payday loan or getting an advance on a tax refund, compared to 24 percent of all Americans.

Financial Knowledge: On a test of five basic financial literacy questions, Mainers answered on average 3.06 financial literacy questions correctly. The national average was 2.99 correct answers.

Financial Decision-Making: 60 percent of Mainers did not comparison shop for credit cards, better than the national average of 62 percent.

“This study highlights how important improving financial education is for Americans, especially during times of financial insecurity,” said FINRA Foundation Chairman Richard Ketchum. “While

(more)

the current economic conditions can exacerbate the consequences of poor financial decisions, some states are still well ahead of others.”

The findings emphasize the need for Americans to take greater charge of their financial well-being by forecasting future financial needs, navigating increasingly complex financial markets and managing risk. The state-by-state results break down financial decisions and literacy by gender, age bracket and region, and highlight how a lack of financial capability has disadvantaged many Americans.

The study represents an unprecedented collection of data on financial behaviors across all 50 states and the District of Columbia. The FINRA Foundation will make the extensive and multi-dimensional information in this study available to policymakers and researchers, allowing them to look at individual financial behavior from various angles and utilize the state-specific data to tailor new programs and policies to promote greater financial capability.

The data were collected through an online survey of 28,146 respondents (approximately 500 per state, plus D.C.), over a five-month period, June – October 2009. Within each state, data were weighted to match 2008 American Community Survey (ACS) distributions on age category by gender, ethnicity and education. Additional information on the ACS is available at www.census.gov/acs. All data in the surveys are self-reported by the respondents themselves.

The FINRA Investor Education Foundation supports innovative research and educational projects that give underserved Americans the knowledge, skills and tools necessary for financial success throughout life.
