Hello,

i would like to propose you make black pool trading illegal because i feel everybody should have the correct data on the real stock value not to mention people using dark pools to buy in the dark pool only to then dump the stock they have bought onto stock exchange market to drive the price down, only to name one. More transparency would be welcomed especially regarding the short interest, utilization and shares on loan. They all should be available to the retail traders in real-time just like they are for the "other" participants of the stock market. And last but not least i would like to suggest not giving market maker licenses to hedge funds or making it illegal for the market makers to short a stock avoiding a conflict of interest and naked short selling. I hope you will consider my suggestion.

Sincerely Grateful

Aleksa Cajic
