COMMENT:

Regulatory Notice 21-19 is a step in the right direction and should be implemented immediately. As an investor, I am losing faith in the US Stock Market. The blatant and clear corruption between departments within the SEC and out are really a clear indicator that we need transparency and a true "FREE MARKET". As we have behind the scenes actors constantly jumping through loopholes to "win" against retail or struggling businesses. Day to day stock manipulation, dark pool trading and ability to hide the true amount of shorts and transfer them outside of the US clearly states FINRA and the SEC are turning a blind eye to the situation. Sad, when the people in question can see the moves of retail although hide the fact that they are destroying the economy from the inside out. Much more should be done over this regulation to protect ALL inventors and have an opportunity to a true "FREE MARKET". Thank you for your time and I truly hope this is a focus and will be addressed as quickly as possible.
