Hi hope you guys take our concerns with more than a grain of salt. We need your help. Lots of people revolt with violence, fire, and looting. This is not the way. But putting our bets on what we think is going to happen in the market and how we think it works should be the way to a better life without anyone trying to false claim they want to "protect us." We need more leverage for retail investors and more risk/higher fines for bad conduct on the market. More transparency. Faster short reporting schedules. More regulation on dark pools. There's obviously a big problem in the market. We need your help!

Sincerely,

Retail investor
