

TRACE – Corporates & Agencies (TRAQS/MPP) Production Test Script for User Testing – Jan 28 2012 Version 2.0

The test script allows users to enter Trades, Cancels, Corrections and Reversals for C&A sub-product: corporate bonds (CORP), agency bonds (AGCY), church bonds (CHRC) and equity-linked notes (ELN), using either the Computer to Computer Interface (CTCI), Financial Information eXchange (FIX) protocol, or the TRAQS Web interface. Trades submitted via CTCI/FIX can be viewed and subsequently taken action against (cancel or correction) using the TRAQS application. There will also be a few test cases of Securitized Products trades for regression testing. Firms are free to test “off-script” as well.

If you participated in the January 21 Saturday test, the trades you entered will be available for reversal action (please use the Original Control Date of 20120121 and the Original Control Number assigned to the trades entered on the Jan 21 test).

The UAT will start at approximately 10:00 a.m. (ET) and end at approximately 1:00 p.m. (ET) on Saturday, January 28. The following conference line will be open for the duration of the test:

Dial-in: (877) 985-6095
Pass code: 840428#

Please note the following for testing:

- Firms can use the CUSIPs/symbols indicated in the test script for each case or are free to choose any security from the API Security Master or TRAQS Security Scan available on the day of the test.
- Contra Party ID of “C” indicates a customer trade. Where “Enter Firm MPID” is stated, please enter any valid broker-dealer MPID as your contra party.
- Please substitute Principal “P” for Agent “A” in the Capacity field if your firm does not support/engage in Agent trades (use of Commission is likewise applicable).
- Unless a time is specified in the script, please use the current time as your Execution Time.
- For testing, the current business date will be 1/28/2012, which should be used as the Execution Date where the field indicates “Current Date”. If your system cannot

support Saturday as a business date, please report these trades as As-Of trades and use 1/27/2012 as the Execution Date.

- If your firm supports Give Up and Locked-In trade reporting, please feel free to enter valid Give Up firms on any or all test cases.
- Clearing Numbers are optional and may be entered if desired.
- The Branch Sequence Number and Memo fields are optional and may be entered if desired.
- Firms are encouraged to assign a Client Trade ID on each trade report and Cancel and Correct using either the Client Trade ID or the TRACE Control Number.
- Trades submitted during the January 21 production test are available for reversal action only. Reversals using FIX/CTCI or the TRAQS web application will be supported.
- Trades entered during the January 28 production test will be available for Cancel and Correction processing using FIX/CTCI or TRAQS web application.
